PROFESSIONAL SUMMARY

Results-driven Backend Software Engineer with 5+ years of experience architecting and delivering enterprise-grade applications across healthcare, CRM, insurance, and education domains. Expert in ASP.NET Core, C#, REST API design, SQL Server, and Azure cloud services (Functions, Logic Apps, DevOps). Proven track record of improving system performance, automating complex workflows, and driving cross-functional team delivery. Recipient of the Rising Star Award (2024) at eClinicalWorks.

TECHNICAL SKILLS

Backend: ASP.NET Core, C#, .NET Framework, Entity Framework Core, Dapper, ADO.NET, LINQ, REST APIs, ActiveMQ, Web Forms, OData Services, NUnit, Xunit

Cloud & DevOps: Azure Functions, Logic Apps, Azure DevOps, Azure Storage, Azure Active Directory, Key Vault, Docker, Jenkins, CI/CD Pipelines

Databases: SQL Server, Azure SQL Database, OData Services, Query Optimization, Schema Design

Frontend: Angular, AngularJS, TypeScript, React (Basic), HTML5, CSS3, JavaScript, jQuery, Razor Pages

Tools & Practices: Git, Bitbucket, Jira, Postman, SonarQube, Visual Studio, VS Code, Agile/Scrum, RBAC, Clean Architecture, AI Tools like (Calude, Codex, ChatGPT)

PROFESSIONAL EXPERIENCE

eClinicalWorks | Software Engineer Apr 2023 – Present

- Architected and delivered enterprise healthcare modules (patient management, billing, inventory) using ASP.NET Core, C#, and SQL Server, supporting high-traffic usage across thousands of concurrent users.
- Engineered secure REST APIs with JWT authentication, custom middleware, and structured error handling, reducing API-related security incidents by standardizing auth patterns across 5+ services.
- Integrated ActiveMQ messaging queues with Dapper and ADO.NET, enabling high-volume asynchronous data pipelines and reducing manual processing time for clinical workflows.
- Designed a centralized portal for client data and financial workflows, integrating a payment gateway and implementing audit logging to ensure regulatory compliance.
- Implemented RBAC (role-based access control) for secure login across multi-tenant enterprise systems, ensuring HIPAA-aligned access management.
- Collaborated with Product, QA, and Dev teams in Agile sprints; authored design and functional specifications that cut requirement ambiguity and accelerated sprint delivery.
- Awarded Rising Star Award (2024) for exceptional product delivery impact and engineering contributions.

Xcode Web Solutions LLP | Software Engineer Dec 2020 – Mar 2023

- Built and maintained 4+ client-facing web applications using ASP.NET Core, ASP.NET MVC, Angular, and AngularJS, delivering projects across CRM, insurance, legal, and education verticals.
- Automated 10+ business workflows using Azure Functions and Logic Apps, eliminating manual processing steps and improving operational efficiency for clients.
- Integrated third-party APIs (Xero, ActiveCampaign, JustCall) into a CRM platform, streamlining business operations and reducing manual data entry.
- Optimised SQL Server queries and schema design, reducing average query execution time by ~30% across key reporting modules.
- Implemented Redis Caching with Entity Framework Core for an Advocate Management Application, measurably improving application response time and scalability.
- Coordinated client communication and cross-team delivery using Agile methodologies and clean architecture principles, consistently meeting project deadlines.

AnsiByte Code LLP | Trainee Software Engineer Aug 2020 – Dec 2020

- Developed desktop applications using DevExtreme UI and Windows-based solutions, contributing to full SDLC from design to deployment.
- Built C# console applications to strengthen core programming, debugging, and documentation practices.

Silver Touch TechLab | Intern – ASP.NET MVC Jul 2019 – Jul 2020

- Completed a one-year internship, developing live web application modules using ASP.NET MVC, C#, and SQL Server, gaining practical experience in MVC architecture and client-server communication.

KEY PROJECTS

Hospital Management Information System — ASP.NET Core, .NET Framework, SQL Server, ADO.NET, Dapper

- Developed patient management, billing, and inventory modules for a high-traffic healthcare platform serving enterprise-level usage at eClinicalWorks.
- Implemented RBAC and secure login for multi-role compliance; optimised Dapper queries to reduce data-fetch latency on critical clinical workflows.

Central Portal Management System — ASP.NET Core, SQL Server, Azure

- Designed a centralised portal managing client data, financial workflows, and payment gateway integration with full audit logging for regulatory compliance.

CRM Application – Trade Alliance — ASP.NET MVC, C#, AngularJS, SQL Server

- Built REST APIs integrating Xero (accounting), ActiveCampaign (marketing), and JustCall (telephony), consolidating 3 external platforms into a single CRM workflow.

Advocate Management Application — ASP.NET Core, C#, Angular, SQL Server, Azure

- Reduced page load times by implementing Redis Caching; developed Azure Functions to automate legal case workflows, cutting manual task overhead significantly.

Insurance Domain – Abacus Insurance — ASP.NET Core, C#, React, Azure Functions, Logic Apps, Odata Service

- Built microservices for real-time claim and policy validation using Azure Functions and Logic Apps; ensured data accuracy and compliance through automated validation workflows.

Education Domain – IQ Academy — Azure Logic Apps, REST APIs, SQL Server

- Automated core business processes via custom Logic Apps; integrated multiple third-party APIs to reduce manual operations and improve system reliability.

EDUCATION

Apollo Institute of Engineering & Technology (GTU) | B.E. Computer Engineering 2016 – 2020

CGPA: 8.84 / 10

RESEARCH & PUBLICATIONS

"Structures & Communication of QR Code" — International Journal for Scientific Research & Development (IJSRD). Proposed a system embedding data into high-resolution halftone QR codes while preserving scan accuracy, demonstrating clear, aesthetically appealing machine-readable outputs.
